Final-year CS student at UiTM Shah Alam, specialising in DevOps. I build automated CI/CD pipelines and containerised deployments, and run a self-hosted Debian server with 8+ Dockerised services behind a hardened Nginx stack and Cloudflare Tunnel, monitored with Prometheus and Grafana. Strong security foundation: my pipelines integrate SAST and container scanning. Available for a 14-week internship from 7th September to 11th December 2026.
